EXPERIENCE

- Typeface AI** Seattle, WA
 - Software Engineer II* *April 2025 - Present*
 - **Summary:** Worked as a full-stack software engineer on the Core Application team, responsible for the UX for the entire web application.
 - **Commenting:** Built the entire front end commenting system for the application, including features such as @mentions, comment search, mark read/unread, comment linking and auto-scrolling, and real time updates between users. Was able to complete in 1.5 months, from inception to user delivery, increasing user retention and to wide adoption.
 - **Performance:** Conducted a large scale migration from using React Context to Zustand stores for the application's main feature, the infinite white board, leading to a ~1500% increase in FPS performance.
 - **AI Tooling & Testing Infrastructure:** Delivered multiple AI agents and skills that were frequently used to increase test coverage across unit testing and integration testing. Created an internal testing mock library to help standardize testing mocks and reduce duplication and tech debt across the repository. Added a new per PR coverage report and CI step that would display the test coverage and health of the repository, before and after merging the PR, and would block PRs that negatively impacted repository health. Updated repository CI to use 4-way Jest sharding, reducing unit test runtime by ~67%.
 - **Container Infrastructure:** Delivered a container grouping system and service layer for documents and nodes in the application's main feature, the infinite white board, with features such as drag-and-drop to add/remove children, cascade delete, infinite nesting, client-facing-only support, and overlap prevention. Was adopted by multiple feature teams as a superior alternative to the previous "feed" centric version.
- Meta** Seattle, WA
 - Software Engineer II - Privacy Infrastructure Org* *July 2021 - July 2024*
 - **Summary:** Founding member of Meta's Privacy Infrastructure Org. Drove a 26% increase in team's adherence to clean coding standards by creating and championing tech debt clean-up plans.
 - **Policy Zone Manager:** Worked on an internal tool that used code verifiers to enforce purpose limitation, allowing engineers from multiple product groups to monitor, retain, and enforce data privacy commitment. Designed and implemented a data asset suggestion feature that drove a 10% increase in verifier coverage, which unblocked an org wide privacy adoption goal. Drove a project that projected a 7.4x speed gain in Meta's continuous verification system and a 96% reduction in queries, while improving system stability. Designed and implemented a recommended remediation UI feature that saved 1500 engineering hours over 2 weeks and semi auto-remediated over 3000 verifier verification states. Reduced page load times by 80% by implementing caching, addressing a critical UX blocker.
 - **Data Use Review Tool:** Worked on an internal tool that tracked data flows through Meta web technologies to enforce purpose limitation. Designed a feature that allowed engineers to declare sensitive data location through a UI, reducing an engineering day to a few clicks.
 - **BiiKeeper:** Drove cross-org collaboration to ship an MVP for an internal tool that eventually became a key part of Bii label prediction engine onboarding, allowing analysts to quickly and easily establish ground truth for label predictions. Led the entire development of this tool, including planning and phased rollouts.

SKILLS

- **Languages:** Javascript/React/TypeScript, Hack/PHP, MySQL, Python, Java, C/C++, OCaml
- **Technologies:** Fluid Framework, ReactFlow, GraphQL, Google Cloud Platform, HTML/CSS, Node.js

EDUCATION

- The Johns Hopkins University** Baltimore, MD
 - Bachelor of Science in Computer Science* *Aug. 2017 - May 2021*
 - **Relevant Coursework:** Artificial Intelligence, Parallel Programming, Information Retrieval and Web Agents, Introduction to Human Language Technology, User Interfaces and Mobile Applications, Databases, Functional Programming in Software Engineering
 - **Distinctions:** JHU Association for Computational Machinery Secretary (2018-2019), Events Chair (2019-2020), and Vice Chair (2020-2021), Bloomberg Scholar, HopHacks Fall 2019/2020/2021 Organizer, Invited to attend the STAQ Quantum Computing Conference at Duke University
